PRAKHAR MITTAL, PMP®

9823186723 | prakharmittal1510@gmail.com | https://prakharmittal.in

Summary

Accomplished Data Engineering Leader and **Project Management Professional (PMP)** with 8+ years of experience directing enterprise-scale ETL pipelines, Big Data transformations, and cross-functional technology initiatives. Proven expertise in combining deep technical acumen (Spark, Hadoop, AWS, SQL) with rigorous **project management methodologies (Agile/Scrum, stakeholder management, risk mitigation, and resource allocation)**. Adept at driving high-performing global teams, aligning complex engineering roadmaps with strategic business objectives, and optimizing cloud-to-on-prem architectures.

Skills

- Delivery Governance.
- Risk Assessment & Mitigation
- Stakeholder Management
- Business Intelligence
- Workload Schedulers
- Linux Shell Scripting
- Performance Tuning
- Data Migration
- SQL and Databases
- Informatica
- Spark
- ETL Pipeline Processing
- Delivery Governance
- Resource & Capacity Planning
- Project Management (PMP)
- Data Modeling
- Agile/Scrum Methodologies
- Teradata and Oracle Utilities
- Data Analysis
- Data Warehousing
- SQL
- Hadoop (Big Data/Hive)
- AWS (Amazon Web Services)

Experience

Data Solution Analyst **02/2026 to Current**
IDFC First Bank **Mumbai India**

- Leading end-to-end development of scalable ETL pipelines using **Amazon Web Services EMR, PySpark, and Jupyter Notebooks**, processing high-volume banking datasets; achieved ~30% improvement in data processing efficiency and reduced latency across critical workflows.
- Spearheaded migration of enterprise data workloads from AWS (S3/EMR) to on-prem HDFS, ensuring seamless transition and enhancing governance while achieving ~25% reduction in cloud infrastructure costs.
- Engineered automated data orchestration using **Apache Airflow**, designing DAGs for complex dependencies; reduced manual intervention by ~70% and improved pipeline reliability and scheduling efficiency.
- Optimized PySpark transformations and execution strategies (partitioning, caching, join tuning), achieving ~35% reduction in job runtime and improved cluster resource utilization.
- Developed interactive data analysis and validation frameworks using AWS Jupyter Notebooks, enabling faster debugging and reducing data validation effort by ~40%.
- Implemented data quality checks, reconciliation logic, and monitoring mechanisms across pipelines, improving data accuracy and consistency by ~85%.
- Collaborated with business stakeholders and analytics teams to design scalable data solutions, accelerating delivery timelines by ~20% for critical reporting use cases.
- Managed production data pipelines with proactive monitoring and issue resolution, maintaining ~99.9% SLA adherence for enterprise data platforms.

Specialist - Data Engineering **05/2019 to 02/2026**
LTIMindtree **Pune Maharashtra**

- Led Informatica migration from v10.1 to v10.4 Virtual Server Component, optimizing mappings, sessions, and pushdown queries; achieved a 40% improvement in data processing speed and enhanced system scalability for high-volume banking data.
- Designed and optimized ETL pipelines with data quality rules, partition pruning, and join optimizations, improving data accuracy and consistency by 80 - 85% across downstream reporting and compliance systems.
- Managed and supported 100+ enterprise-scale ETL applications across the African continent using a diverse technology stack Hadoop (HDFS, Hive, Tez), Teradata, Informatica, Unix/Linux, TWS Tivoli, CA WADE, and Airflow ensuring 99.9% SLA adherence for critical production workloads.
- Developed and deployed scalable ETL scripts (Python, Spark, Sqoop, Shell) for integrating structured and semi-structured data into Hadoop, enhancing data availability and enabling near real-time analytics for customer insights and fraud detection.
- Refactored legacy data models by introducing partitioning, bucketing, and clustered tables (CT), and replacing Spark execution with Tez engine, reducing query runtime by 35% and improving cluster resource utilization by 25%.
- Drove migration of legacy on-prem Hadoop data marts to Dell ECS (S3 compatible object storage, hybrid cloud model) by leveraging HDFS - S3A DistCP, data tiering, lifecycle policies, encryption with JCEKS credential providers, and replication strategies. This migration: Reduced on-prem storage overhead by 45%. Enabled elastic scaling and policy-driven archiving for regulatory data. Improved data durability (11 nines) and disaster recovery capabilities with geo-replication across regions.
- Onboarded 10+ business units onto Big Data platform, providing ingestion frameworks, access governance (Ranger/Atlas), and scheduling automation, increasing enterprise-wide adoption of Hadoop/ECS for advanced analytics by 50%.

Senior Data Engineer **06/2023 to 12/2023**
LTIMindtree (On-Site) / ABSA (Barclays Africa Group) **Johannesburg South Africa**

- Initiated and led the Data Rail Program, transforming legacy Teradata warehouses into a scalable Hadoop-based architecture, enabling SQL-to-Spark SQL translation and reducing query processing time by 45%.
- Converted Teradata marts and extracts for 12 African countries into Hadoop marts using Hive, Spark, and Teradata utilities, achieving 50% faster data ingestion and 30% savings in infrastructure and licensing.
- Built complex business and financial analytics pipelines by integrating multi-source data, doubling data-driven revenue potential for ABSA through enhanced decision-making capabilities.
- Managed team of 12 Big Data Engineers across on-site and offshore locations, ensuring coordination between development and support while maintaining over 98% delivery compliance.

Education

Executive MBA: **BUSINESS ADMINISTRATION AND MANAGEMENT** **05/2026**
Symbiosis International University (SCMHRD) Pune, MH

BACHELOR OF SCIENCE: **INFORMATION TECHNOLOGY** **05/2019**
SRM Institute of Science And Technology Chennai, TN

Publications

Event Study of the Effect of U.S. 2025-2026 Tariffs on the Indian Stock Market, MBA Dissertation Research Paper, 02/01/2026, This dissertation studies the measurable effect of U.S. tariff-policy announcements on Indian equity prices, utilizing a hand-collected dataset and event-study methodology.

Certifications

- Project Management Professional (PMP) - Certified by PMI, 2026
- Ranked as a Top scorer in the Executive MBA program, specializing in Finance and Business Analytics
